

**Application**

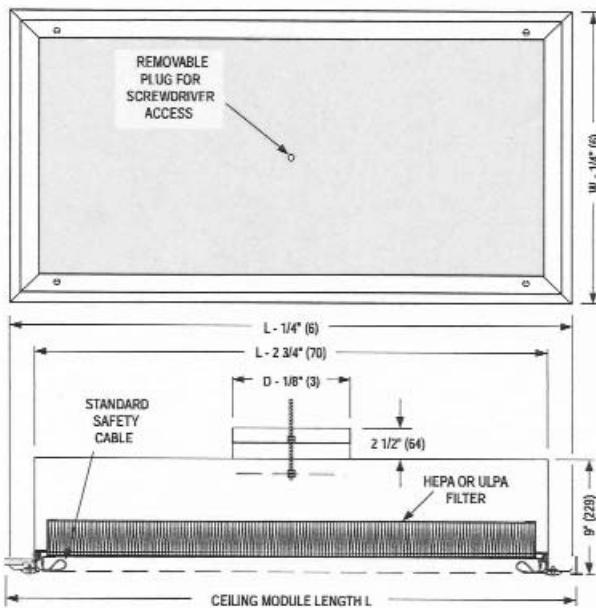

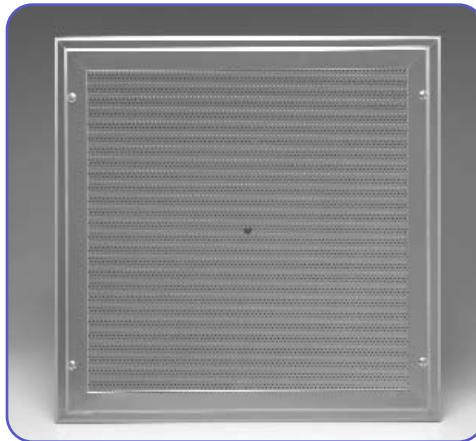

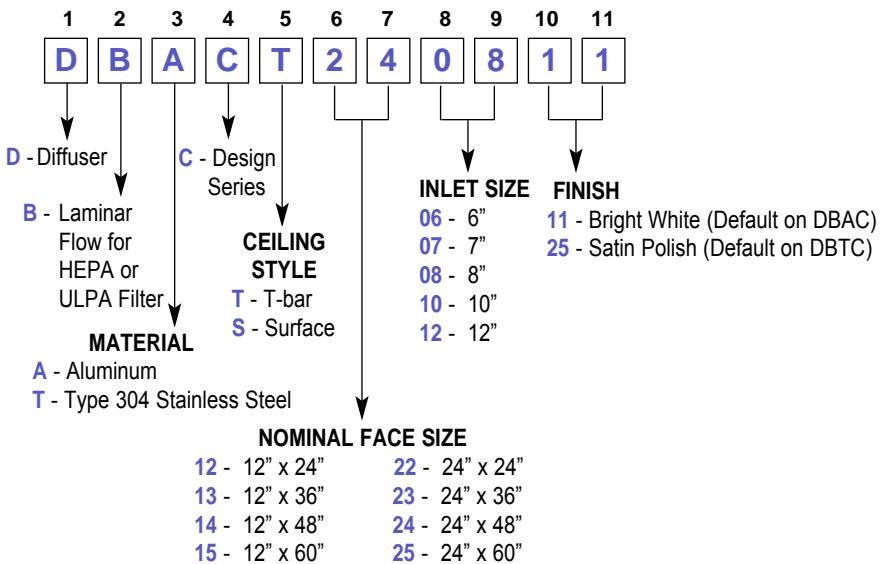

The Carnes DB Series Laminar Flow Diffusers are used to produce a non-aspirating, low velocity, uniformly downward moving "piston" of conditioned air. They are designed to accommodate a Gel Seal HEPA or ULPA filter. The filters can be easily removed and replaced from the face of the unit. These quality filters incorporate a separatorless 2" (51) deep media, integral test port and an anodized aluminum gel seal frame.

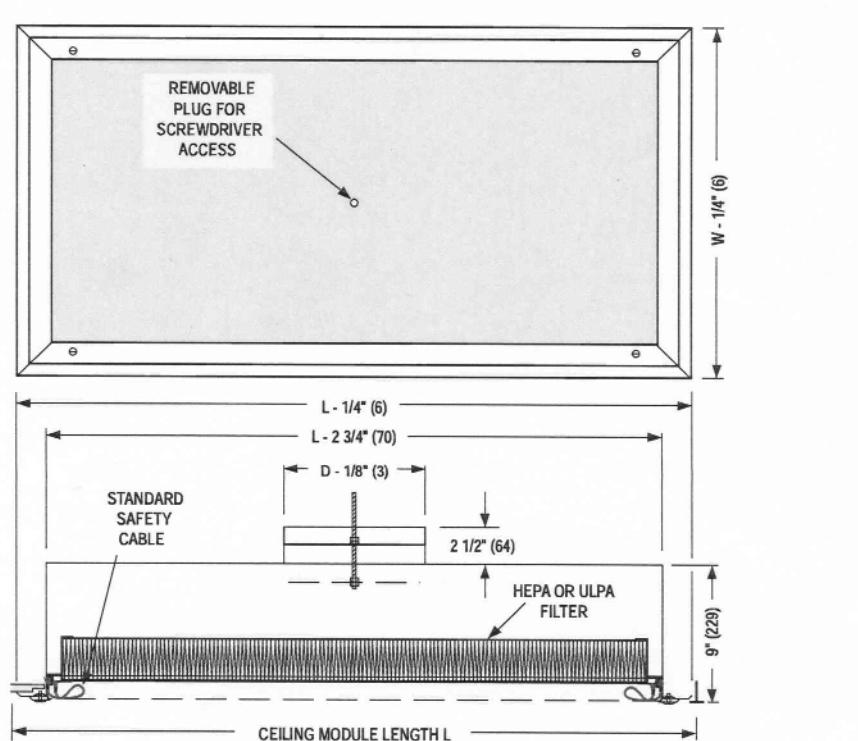

**Standard Features**

- Available in type 304 stainless steel or alum. construction.
- Same unit will work for both T-bar or surface mount applications.
- Face plate is attached with 1/4 turn fasteners and is easily removable.
- Safety cables are included as standard to prevent accidental dropping of removable face.
- Perforated face has 3/32" holes on 60° 1/4" staggered centers (13% free area).
- Round inlets are standard.
- Integral seismic clips are standard.
- Clear anodized extruded aluminum filter frame with a test port for damper adjustment, filter pressure drop measurement or to perform leakage (scan) test.
- Filters are packaged independently from the diffuser final installation in the field (by others). Filter needs to be purchased separately.
- HEPA filter has 99.99% minimum removal efficiency on 0.3 micrometer particle size. ULPA filter has 99.9995% minimum removal efficiency on 0.12 micrometer particle size.
- Integral damper with screwdriver slot adjustment is easily adjustable.
- Standard finish is #3 Satin polished for stainless steel and Carnes bright white for aluminum.

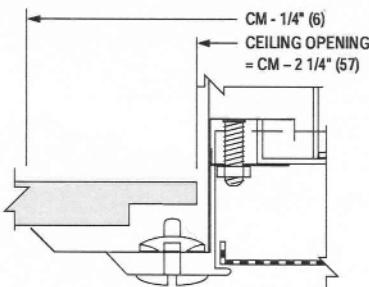

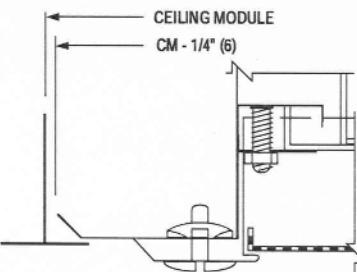

**Available Options**

- 316 stainless steel construction available.
- Other colors available upon request.
- Model DXHA HEPA filter has 99.99% minimum removal efficiency on 0.3 micrometer particle size (p. A247).
- Model DXUA ULPA filter has 99.9995% minimum removal efficiency on 0.12 micrometer particle size (p. A247).

CFM - cubic feet per minute

FPM - feet per minute velocity

Pt - total pressure - inches w.g.

Ps - static pressure - inches w.g.

T - throw in feet

NC - Noise Criteria (values) based on 10 dB room absorption, re 10<sup>-12</sup> watts**Performance Notes:**

1. Throws are the average vertical distance in feet to terminal velocities of 100, 75 and 50 fpm. Based upon a cooling ΔT of 10°F, 9 ft. ceiling.
2. Performance data is for diffusers with clean filters. Filters may be operated up to a final resistance of 2" w.g. (500 Pa).

3. \*Maximum air flow shown is based on 150 fpm velocity per square foot of filter face area. Exceeding these air flows may result in reduced filter efficiencies. Refer to the engineering section for more details.
4. Data derived from tests conducted in accordance with ANSI/ASHRAE Standard 70 — 1991.
